

WANT TO BECOME A CHILD PASSENGER SAFETY TECHNICIAN?

Education and proper use of car seats, booster seats, seat belts, and vehicle safety systems helps save lives and can prevent injuries and deaths. Child Passenger Safety (CPS) Technicians are trained educators in the field of occupant protection. The National Child Passenger Safety Technician Certification Training is a nationally standardized curriculum developed through a partnership of organizations.

WHY ARE WE HERE?

Motor vehicle crashes are a leading cause of death and injuries for children. When used correctly, car seats and booster seats greatly reduce the risk of hospitalization, injury, and death for children. Caregivers generally have good intentions, but Ohio law and car seats can be very confusing. This leads to most car seats being installed and/or used incorrectly which can be extremely dangerous or even fatal for a child passenger. We are here to educate, empower, and support caregivers so they can confidently use and install their child's car seat or booster seat correctly each and every time.

CPS TECHNICIAN ACTIVITIES

This training will equip you with the basic skills to educate caregivers about child passenger safety. You may accomplish this in several different ways, including:

- Checkup events
- Health and safety fairs
- Educational presentations
- One-on-one interactions with caregivers

Car seat checkup event

One-on-One Interactions

WASHINGTON COUNTY OFFERS

Ohio Buckles Buckeyes: Marietta/Belpre Health Department serves as the coordinator and provides child safety seats and booster seats to eligible low income families. The goal is to increase availability of child safety seats for families who could not otherwise afford them and to increase correct installation and proper use of child safety seats.

Car Seat Fitting Station: Washington County Family and Children First, Marietta/Belpre Health Department and the Marietta Fire Station 1 serves as fitting stations which are locations where parents and caregivers can receive education and training on how to properly install and use their child safety seat.

Car Seat Events: A team of Child Passenger Safety Technicians will host or attend community events to check child safety seats at no cost for families. It's a good way for parents and caregivers to get answers to car seat questions and receive education and training on how to properly install and use child safety seats.

Booster Seat Education: Child Passenger Safety Technicians offer a 20-30 minute booster seat education perfect for children 3-8 to help young them learn why safety belts need to cross strong bones; where kids can safety sit; and how children can help the driver and have fun!
